DETAILED ACTION

Allowable Subject Matter

1. Claims 1-28 are allowed.
2. The following is an examiner's statement of reasons for allowance: the record of prior art does not show a generator comprising a rotor including a first inner band located around at least a portion of each of the end-turn segments, the inner band having at least a near end, a distal end disposed opposite the near end, and a thickness, the near end located proximate the lamination core, and the thickness of at least a portion of the first inner band decreasing from at least a point proximate the distal end to at least a point between its distal end and its near end, and a first outer band located around at least a portion of the first inner band, the first outer band having at least a near end, a distal end disposed opposite the near end, and a thickness, the first outer band near end located proximate the first inner band near end, and the thickness of at least a portion of the first outer band increasing from at least a point proximate its distal end to at least a point between its distal end and its near end as shown in claims 1 and 11. Claims 19-28 are method claims. However, these claims also show the support structure of the rotor end turns similar to claims 1-18. As a result, they are allowed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably
